

## **Colorado Bridge Enterprise Notification**

### **Project Specific Statewide Construction Management, Inspection & Materials Testing**

#### **Colorado Bridge Enterprise**

The Colorado Bridge Enterprise (CBE) would like to inform our partners in the consultant engineering industry, regarding an upcoming advertisement and solicitation for professional engineering services.

CDOT regions have been accelerating projects and will have a shortage of staff to cover the upcoming Bridge Enterprise project construction management and materials testing workload.

In order to ensure high quality construction work and compliance with contract documents, CDOT intends on issuing a solicitation for submittals of a Statement of Interest and Work Plan for construction management and materials testing services. CBE has identified a list of projects statewide and intends on advertising one (1) selection for multiple contract awards. Multiple projects will be combined into packages. The packages will be grouped according to location and contain a sum of projects roughly equal in size to each other.

Submitting consultants must be willing to work on any of the listed projects statewide, and may have to support multiple projects at one time. The purpose of a statewide solicitation is to streamline the process, save time and money as it relates to the selection of the most qualified firms, and minimize consultant work effort responding to multiple solicitations.

This solicitation will address those bridge projects scheduled for construction within the next calendar year (individual project schedules may extend over multiple years).

The Project is anticipated to advertise Mid-May, 2011

CDOT/CBE anticipates consultant staff support at projects sites in July 2011.
